Electronic walk-in refrigeration control with the 120° ambient advantage

- **Tru-Dmnd™ defrost** initiates defrost cycles only when defrost is needed.
- Avoids up to 93% of standard system defrost cycles and up to 12% fewer cycles than a “smart defrost” control.
- **120° ambient refrigeration design** maximizes performance range on the hottest days.
- **Door ajar alarm**.
- User interface can be located remotely in a manager’s office.
- **CAT 5 cable connectivity** for ease of installation.

- **Diagnostic functionality** for tracking usage, temperature variations, door opening duration and more.
- **Fewer defrost cycles** improves temperature stability in the box and a safer environment for the contents within.
- **Self-adjusting defrost cycles** means no need for seasonal adjustments.
- System pays for itself in less than two years*!

*overall savings will depend on refrigeration sizing

- **Eliminates the need for other accessories/components including:**
  - Alarms
  - Secondary refrigeration controls
  - Defrost time clocks
  - Fan delay switches
  - Defrost termination switch
